Snorm Indi Panel

www.for-exe.com

Copy the 'ex4' files to your MT Files folder – Engulfing and Pin Bar indies are just included for demonstration purposes.

Copy the 'tpl' files to your MT Templates folder – again, included for demonstration purposes only.

Restart MT.

Open a new chart and apply one of the templates, so you can see how everything is setup. If all goes well, you should see the indicator in action and be able to test the features.

Create your own template, using your own indicator.

Please watch the YouTube video for a full explanation of the features (link on the download page).

Note: Loading multiple copies of the Indi Panel on to a single chart will cause some odd problems. Rather use a separate chart for each indicator that you would like to reference (we might think about adding additional indicator columns in the future).

This indicator is free for your personal use. Do not share or sell it – rather refer your friends to www.for-exe.com if they would like a copy.

Use of the Snorm Indi Panel is subject to the Terms and Conditions on our website.

Unfortunately, we are unable to offer free support for the use of this indicator or with MetaTrader – please don't ask for such. One-on-one assistance, or customisation of the indicator, can be provided for a reasonable fee though.
